TIPS AND TRICKS FOR A GREAT MIX

MIXING TIPS

For mixing formula in a shaker cup always add liquid to the shaker first, then add powder, ice, any other ingredient and shake. It is normal for the product to foam, simply wait for it to settle, give one final mix and enjoy.

ADDING ICE

Ice chills mixed drinks and when making a smoothie, ice thickens your drink. For shaken drinks, once cold, you can get rid of the ice by pouring the drink from the shaker into a cup. Experiment a little and adjust your ice level for taste, texture, and your own personal style.

KEEP IT SIMPLE

If a recipe calls for an ingredient you don't like or don't have, simply use a similar item and make it your way.

READ YOUR LABELS

Be sure to read labels and account for any added protein and phenylalanine (PHE). It is always best to use flavored drinks or mixers that have little to no protein or PHE added.

ALL CITRUS IS CREATED EQUAL

Lemon, lime, and orange juices are all interchangeable. Getting tired of one flavor? Keep drinks fresh by swapping one fruit flavor for another.

GO INCOGNITO

If mixing PKU formula with a store-bought beverage, once you shake it up, pour back into the original bottle for easy travel and drinking formula in public settings with ease.
